

PERKS COMPLETE

YOUR REAL-TIME CLOUD ACCOUNTING
AND FINANCIAL SOLUTION

Integrated business services

REAL-TIME

DATA

Why cloud?

Cloud accounting is the future of accounting. In a few short years it will be the only way to operate. If you are not using it you will be left behind by your competitors, suppliers, advisers, and even your clients as they demand you keep up with technology.

Perks Complete will put your business in the best position to succeed. It will help you

make more timely decisions while operating your accounting and finance functions more efficiently and effectively. You will have more time to concentrate on those areas that are most important to your business, not the administration tasks.

How can it help me?

When implemented effectively, cloud accounting solutions will help you set up your business for success.

It does this by:

- Helping you make informed business decisions by providing you access to your business' real-time financial and operating information anywhere, anytime.
- Improving efficiency in your accounting and finance functions and in the way you interact with your advisers. This will allow your accountant to provide real value, adding advice and business insight.

- Protecting your confidential financial and operating information through leading security measures and multiple data back-ups. You'll never lose information again if your computer dies or files are corrupted.
- Allowing multiple people to access and work on your data to speed up the delivery of information.

The real benefit of cloud accounting is that you're able to access real-time information on the go. It puts you in the driver's seat so you can make informed decisions that will put your business ahead.

Key benefits

BETTER DECISION MAKING

Cloud accounting happens in real-time.

TIME SAVINGS AND EFFICIENCIES

Automated data feeds from bank accounts, credit cards and data links between financial reports remove the need for manual data entry. Software that learns increases efficiencies in your business.

ACCESS, ANYTIME, ANYWHERE

You can access your files anywhere you have internet access - from home, the car, on a tablet and while on holiday.

SECURITY AND PEACE OF MIND

With the same level of security as your bank, your information is better protected than if it was on your own computer or server. With multiple back-ups, it is also more secure and protects you against file corruption or your computer dying. Software is automatically up-to-date.

MULTI-USER ACCESS

No more time consuming file transfers or hand-delivering paperwork. You and your Perks adviser will have access to the same information at the same time and advice will be delivered in a more timely manner.

Moving to the cloud can seem daunting. But our team of cloud accounting specialists will make this transition seamless. Your historical data can be brought across to the new platform and we'll make sure your team are trained to use your new cloud accounting package.

ANYTIME

ANYWHERE

The Perks Complete Package includes:

✔ CUSTOMISED REPORTING

✔ PAYROLL

✔ ACCOUNTS PAYABLE

✔ DEBTORS

✔ BOOKKEEPING

Frequently Asked Questions

How is cloud accounting different from traditional accounting software?

Cloud accounting software updates financial information automatically and provides reporting in real-time. Account balances are always accurate and multi-currency and multi-business transactions are handled more efficiently. The provider completes the backups, updates happen automatically and nothing needs to be installed on a business computer.

What is the single biggest advantage of cloud accounting?

You have access to up-to-date information on command anywhere, anytime.

Which software is best for my business?

We'll do a complete review of your business systems and processes to ensure the chosen software is right for you. Xero, MYOB, QuickBooks and others have their pros and cons and a number of specialised add-ons in areas such as inventory management and point of sale. We'll make sure you get the software that fits your business best.

Is my information safe?

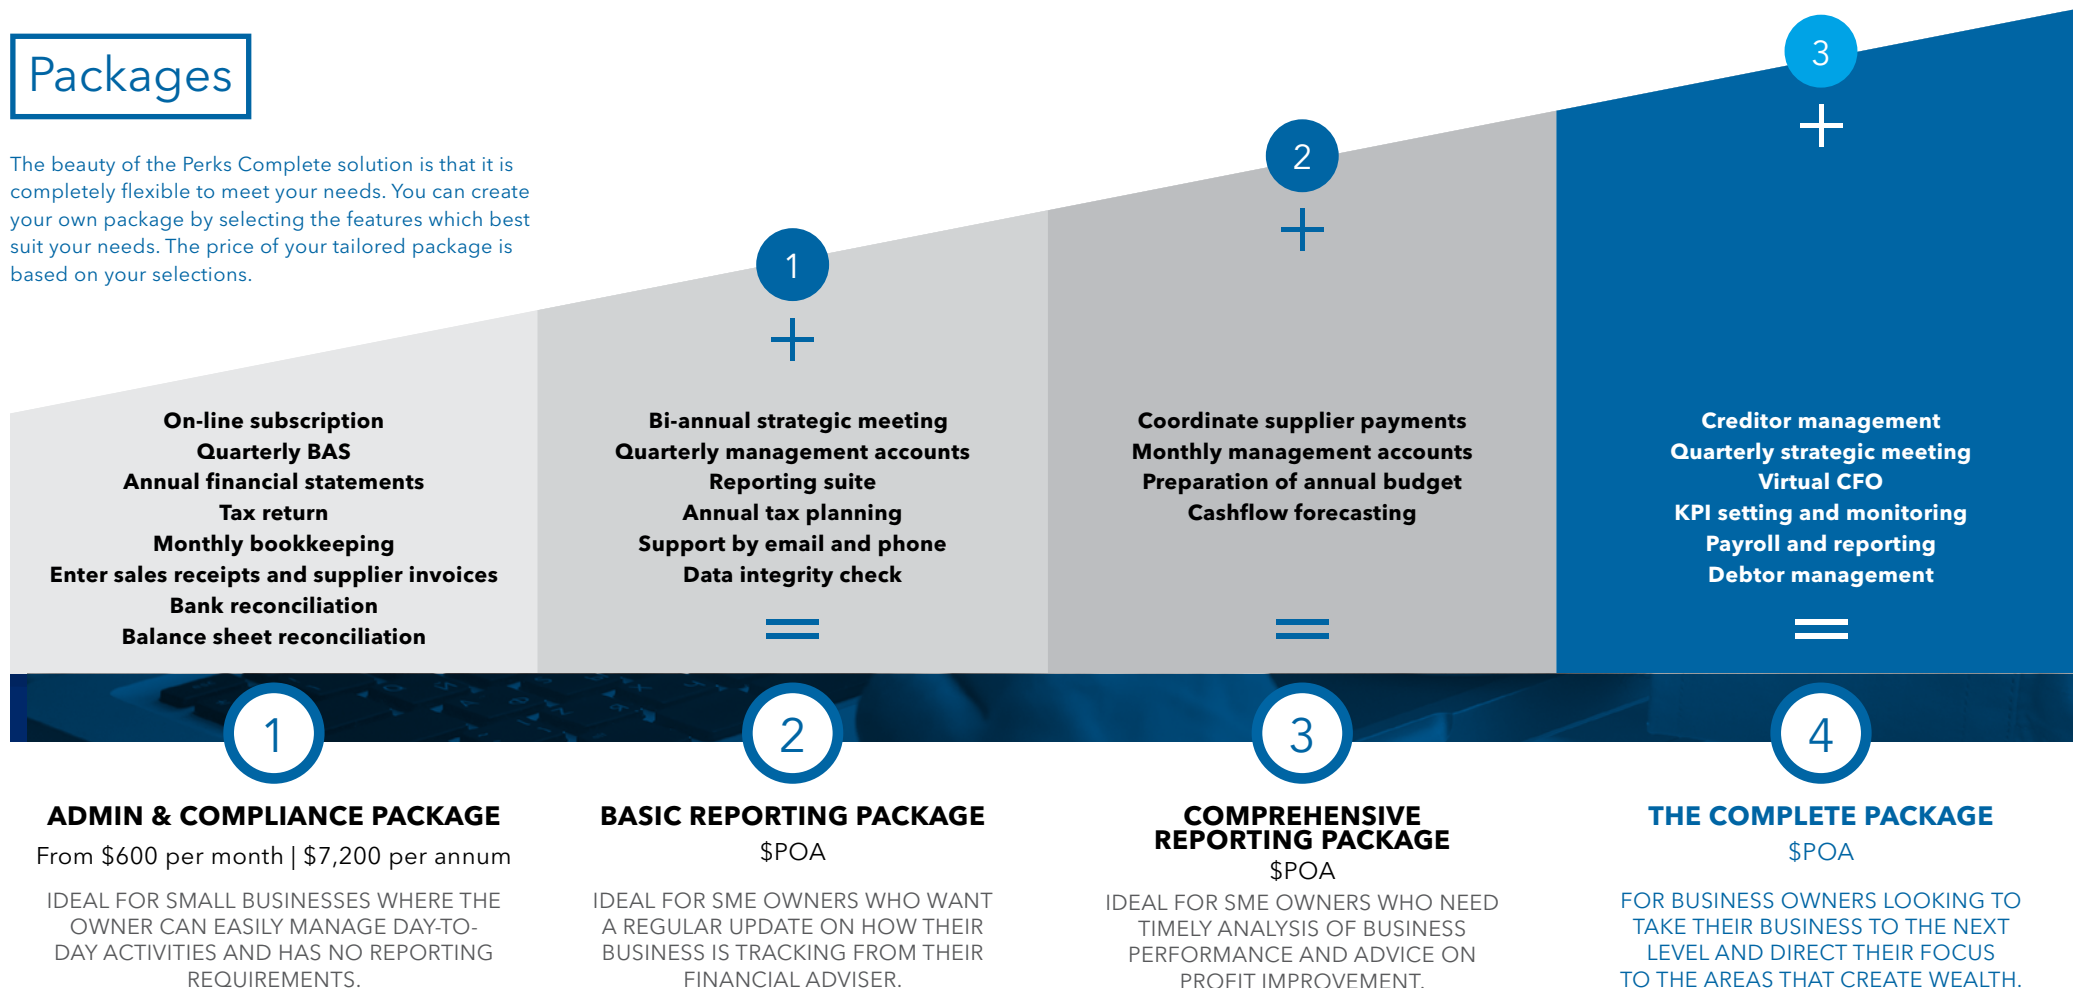

The cloud provides an equally secure – and sometimes even more secure – method of storing financial information than traditional accounting software. Many people don't realise they are already using cloud computing. Gmail accounts, for example, use this method to store data, and information on the cloud is encrypted and password protected, just like internet banking. Cloud accounting leaves no trace of financial data on business computers. Providers often have back-up servers in two or more locations.

How do I move from desktop software to the cloud?

Perks cloud accounting specialists will work with you to make this transition as easy as possible. Your historical information will be brought across to the cloud and we'll train your team in how to use the new system. The cost of conversion is worked out up-front and customised for your business.

Packages

The beauty of the Perks Complete solution is that it is completely flexible to meet your needs. You can create your own package by selecting the features which best suit your needs. The price of your tailored package is based on your selections.

There is no single cloud solution. Perks is dedicated to helping you select the best solution and integrating it into your business. We can work with you on current business data and help plan and advise for today, tomorrow and next year.
